Current problems

Many people ask the same content for 01 problem (duplicate question)

Officers coordinate questions manually, which easily leads to errors when there are lots of questions, increasing the response time

Inappropriate questions that do not conform to fine customs and traditions still have to be manually screened

Not grasping the people's needs, complaints and the gaps in policies in a timely manner

Innovation initiatives

On August 6, 2021, Tay Ninh province's initiative "Mining" Digital Citizen Query Database for Better Public Services" was selected in the top 3 of the Digital Innovation Citizen Powered Innovation Initiatives (CPII).

Overview of the Online Q&A Portal Data Mining System

Synthesize + categorize

Question and answer collection system:

- Perform data cleaning
- Perform data classification

Analyze

Data analysis system:

- Use machine learning models
- Continuously train the model to increase the accuracy of the results

List

Based on the analyzed data to find out the issues people are concerned about:

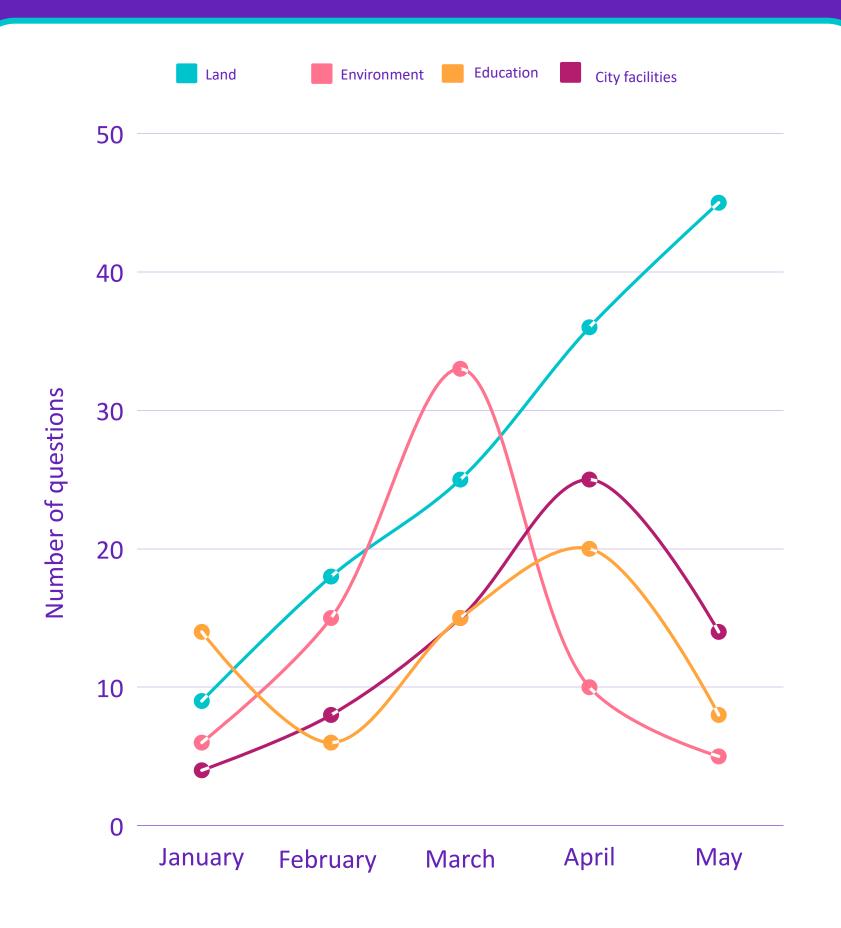

- Areas people are interested in (*land, environment...*)
- The place where the most questions arise
- People's satisfaction

Automate

The system automates manual operations of officers to shorten response time:

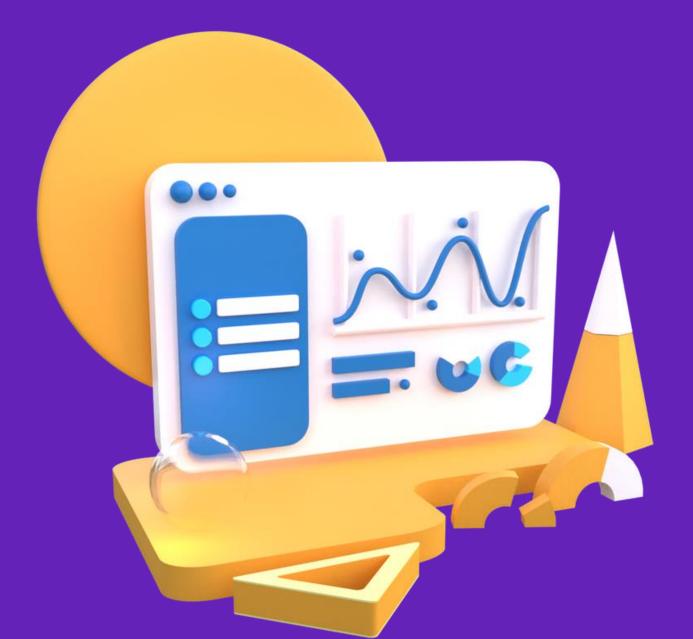

- Automatically transfer questions to the right processing unit
- Automatically identify offending questions (vulgar words, politics, etc.)
- Automatically identify questions that have been answered by the similarity of the question content

RESULTS

• Trend analysis chart of people's areas of interest over time

RESULTS

The system synthesizes keywords that people are interested in by specific fields, locations, and issues from which can capture people's needs.

Top keywords in September, 2022

Tuition payment
